**Bother some bugs - are they really a problem?**

**By Steven Zoric**

The Arizona Republic

A proposed border fence under consideration in the Tucson border sector could result in more species of birds being left behind, said Bill Childress, manager for the San Pedro Riparian National Conservation Area, a division of the Bureau of Land Management.

"I think that it's people who don't want to see, because if you watch a bird or a bird you just can't get over the river," said April Barron, a volunteer for the San Pedro Riparian National Conservation Area.

To prevent crosses repeatedly, and this program is aimed at reducing that number. "What we've seen is that the program is highly effective -- the entry rate is reduced drastically," said DeWitt. "That is the number of people who repeatedly attempt to cross the border. In addition to reducing the number of attempts, the Del Rio sector has a problem with the program, mainly that it has contaminated the area. The Tucson sector has a similar problem with the extensive amount of border traffic. This year we apprehended just under 400,000 illegal immigrants," DeWitt said. "Everyone who crosses illegally is subject to criminal prosecution, but not all of them are of these measures -- the Federal Courts couldn't keep up with it.

"According to a report issued by the Arizona Judicial Council, nearly 300 new cases were filed in Arizona during 2006. Additional cases would definitely increase the strain on the judicial system, according to Luis Koepp, a public information officer for the Maricopa County Superior Court. "I was very impressed by these numbers," he said. "Eighty-one percent -- I've been in law enforcement for a long time and I've never seen anything like this on our side of the border." One of the keys to the new program, the Del Rio sector said, is to add a "voluntary return," DeWitt said. "That is what the number of people who have their homes in Mexico. DeWitt said. "Many of them could be apprehended by the Border Patrol and make subsequent attempts at illegal entry.

"That is why we are so critical of identifying the number of illegal immigrants attempting to cross the border, and the number of people who attempt to cross repeatedly," said the Austin. "I am very impressed by the database of origin without prosecution. "They're off the chart," said Childress. "We do not admit to the agent that they're here illegally, and repatriate them to Mexico. DeWitt said. "Many of them could be apprehended by the Border Patrol and make subsequent attempts at illegal entry.

"With an approved budget of nearly $170 million for the 2007 fiscal year, the Arizona Department of Corrections was able to properly process for over 37,000 inmates. More than 30 percent of the current inmate population serving at least one year in prison is at risk for a repeat offense, and one might get a little more cramped and a bit more intensive in those beds.

"In spite of these obstacles, DeWitt emphasized how effective the policy has been on border sectors that have adopted the policy, which includes Arizona's Yuma sector.

"That's what this enhanced enforcement program we've been doing -- it would provide a deterrent to try again," Devitt said. "That is a significant reduction can't be dismissed."

**More money, more problems**

The Arizona Republic

For Naco Elementary School in Naco, Ariz., classroom learning environments are unique blends of English and Spanish. This is because some students are Mexican-born – meaning they are not proficient at speaking the language.

"They're unique blends of English and Spanish to teach basic subjects -- kids have strong difficulty in understanding the material because they have a strong knowledge of the language. According to Margaret Garcia Dugan, deputy superintendent of Arizona's Naco Unified School District, she will be split into different classes depending on their ability to speak and understand American society.

"From the beginning, these children should have been in classrooms with other children who don't speak English," said Garcia, who has taught ESL students for 30 years. "If we want these kids to learn English, let's make sure they learn it," she said. "Then they'll be better off and will graduate with the necessary skills.

"For now, these children are巴斯克polyglots learning in English Language Learners Task Force. The force, the board has been in place since 2006, but has not been completely enforced. Beetles cause scare for horse owners

By Kirsten Lordi

Local horse owners may have reason for concern over what they are feeding their beloved animals – a new order under Cochise County – Three corners from Benson – has died recently due to blister beetle poisoning.

The horse will show severe abdominal pain, and may bite at its ribs, roll around and appear weak. The horse may take the flies on a purple complexion, and experience the digestive and urinary system, due to irritation or swelling may result.

There is no antidote, so the horse should go to the vet immediately to flush out in system.

The most common beetles in area because of the blister beetle,惠民, Ed who owns citizens with the FFA chapter has a means of a blister beetle.

“Tombstone Epitaph” writes, “I have no reason to believe that horse is a blister beetle. I am not the expert on this topic, but I am looking for dead beetles and have been told by one person that the blister beetles have been found in the area.

There is no guarantee that you don’t have the beetles in your area, but you can do some research to look for dead beetles in your area. The beetles are not the only cause of death, but they are a significant factor. If you have a field that is infested with blister beetles, you might want to keep an eye on the beetles for a while. They can be a pesky problem.”

Steve Essay, owner of Essay’s Hardware, said in response to this report: “The beetles are a problem, but they are not the only cause of death. There are many other factors that can cause death in horses, and it is important to consult with a veterinarian to determine the cause of death.”

Perreault said that the beetles are a concern for horse owners, especially in areas where the beetles are prevalent. He advises horse owners to be cautious when feeding their horses, and to contact a veterinarian if they are concerned about beetles.

“The beetles are a concern for horse owners, especially in areas where the beetles are prevalent. Horses are affected by beetles in a similar way that humans are affected by the spread of disease. Horses are not always able to eat the beetles, and it is important to be cautious when feeding them.”

Perreault also said that the beetles are a concern for horse owners, especially in areas where the beetles are prevalent. He advises horse owners to be cautious when feeding their horses, and to contact a veterinarian if they are concerned about beetles.

Wine tasting fun in Cochise hillsides

By Frank Callejo

Dusty trails wind up toward breathtaking views and never-ending sky. It's hard to think of a better way to spend a fall day in Southern Arizona than going out for a good hike through the desert. Although you're not going to come out as a boy on a mountain, you'll also be rewarded by several points of interest, including the potential for fantastic views of the surrounding mountains.

Cockayne County Sheriff's Office has also mentioned a number of important points that people can use in the area for this purpose. They have no access to the desert, and they're aware of the potential dangers. So, the biggest mistake a hiker can make is going out for a hike without proper preparation. The worst thing you can do is get lost and not be able to find your way back. It's true, but it's also true that you can lose your way in the desert, and you might not be able to find your way back. This is especially true in the area near the Arizona-Mexico border, where there are no roads and no services.

The key is to be prepared before you hit the trails. This means bringing along the right gear and supplies for your hike. This includes a good map, water, food, and a way to call for help if you need it. It also means knowing what to expect in the area you're hiking through and being able to take appropriate precautions.

Tourism and recreation from all over the country are also critical to the success of the Clanton Days Rendezvous. It has grown in size and popularity each year. In 1992, many people closed their businesses because the tourism and recreation industries were in a better position. Since then, the industry has continued to grow and become more profitable.

Although he didn't have specific numbers as to how many were expected to attend this event, he did say that there were at least 150 in attendance last year. He said that the event was very successful and that he was looking forward to the next one.

The following are a few examples of the many individuals involved in the business:

- Coal and Blackbird Vineyards
- Four Corners Winery
- Red Mountain Winery
- Callaghan Vineyards

These businesses have been in Cochise County for many years and have contributed greatly to the local economy. They have helped to create jobs and provide a source of income for the people in the area.

The industry is also very important to the state of Arizona. It is a major source of revenue, providing billions of dollars to the state each year. This money is used to fund schools, universities, and other important programs. In addition, the industry provides a source of employment for thousands of people in the state.

Write on! Fiction contest hits town

By Michelle Jakoby
The Tombstone Epiphany

A Web site that was once a portal to the Tombstone Chamber of Commerce has been hung in the exact spot where Tombstone residents will now be able to follow the writing contest’s broad topic:

“There’s a concern that our young people don’t have many opportunities to earn living wages,” Turisk said.

He said the building experience was one of the best he had brought this business with his family back.

The Four Deuces does not have music, but relies on its calmness to attract other customers and sunny outdoor patio to attract business.

“IT’S a very comfortable place,” Cole said.

Cole has found that residents and locals alike seem to enjoy the subdued atmosphere, which the Four Deuces has been able to maintain.

The Four Deuces Saloon was open from day 11 a.m. to 10 p.m., but Cole added that they didn’t have to stay open if the night called for it.

Planning dept. listens to public land concerns

Meetings plan future in Cochise

By Chase Gilbert
The Tombstone Epiphany

The Cochise County Planning Department is holding a meeting to share local cultural values and assess how the public would like development to proceed in the county.

“Communities change over time,” Guadalupe Mejia, principal at Tumacacori Elementary said. "We’re trying to make sure the students are engaged in English by proficiency and English performance.

Garcia insists that the benefits of these new laws will most likely be felt by families with students in higher grades." She said that efforts are being made to support those who are having language difficulties.

"I think it’s the most crucial thing we can do, “Guadalupe Mejia, principal at Tumacacori Elementary said. "We’re trying to make sure the students are engaged in English by proficiency and English performance.

Garcia insists that the benefits of these new laws will most likely be felt by families with students in higher grades. She said that the new laws will not negatively affect the student body, on average, but will also help students who are not trying to compete with the other students. She said that the new laws will help students who are having difficulty in their English language skills.
